One Stop System overview

We let our systems do the hard work, so you don't have to! Running in all 900 stores, we have refreshed the entire back-end system to increase efficiency.

A newly improved engagement and communication tool for stores.

With features like Business Development Manager (BDM) pages, electronic store standard checks, online training and video comms.

The best-in-breed of order forecasting tools used in convenience retail. Using world class algorithms, it predicts stock capacity based on sales, seasonal changes and events in the local area.

All processes are currently linked into the daily tasks in our company estate and our communication plan and we have up and coming developments such as smart reduction tools.

This state-of-art system changes the way retailers work. Allowing all the front-end operations to run through the system, it helps with sales, stock control, cashing and reporting.

Retailer benefits

- Better handheld terminal functionality, handling waste, adjustments and updating it via the WiFi connectivity
- Adding local products and suppliers to have a real eye on sales, ordering and margins
- Build specific reports on what you need
- Tills are easy to use and navigate
- Get all the knowledge and training to make the right decisions faster

Remain stocked with our auto-replenishment system

We are always driving this mantra - every minute of every day, our commitment to you is just-in-time stock and ordering systems.

It's simple. The system orders the right items to re-stock your store based on what's been sold and changes with seasonal growth. You will only need to tweak your order for local ranging. It will give you an accurate view for stock taking, control, waste and theft. You'll find yourself with extra time!

We live by the principle of full shops make more money.

"We've got very little waste now as the EPOS system just tells us what to order on a daily basis. This is good for customer confidence as they know they will get fresher products which in turn leads to a bigger basket spend as they go on to buy other things around the store."

Franchisee, Sunder Sandher from Leamington Spa

How does One Stop's technology help you?

The ease and security of our technology has enabled retailers to easily manage multiple sites. The technology systems enable our franchisees to access systems remotely whenever they need to. The systems also give the franchisee full trust in their colleagues as the system reports on how much stock is on the shelf and what is being sold, in turn keeping track of stock within the store.

The group reports allows retailers to gain a clear vision of all key areas of business performance across all stores. The reporting includes sales, stock, profit and loss, waste and markdown... etc. This allows retailers to quicker and informed decisions.

The Wilson brothers have 10 stores and are planning to grow their stores in the future.

Hear it from franchisee Danny Wilson about how our technology systems have benefited them...

"Since moving to One Stop it has been a lot easier to manage the workload. We've got multiple stores now - their technology and systems have made this possible. We're saving a lot of time and are trading way beyond what we were with a previous symbol group."

Franchisee, Daniel Wilson
